FOREWORD

IVth International Slovak Biomass Forum

ISBF 2004 is focused on practical and sound solutions of the most important legal, financial, organisational and process barriers recently existing in the market environment.

In the context of possibilities offered by EU accession funding/community programmes available for new EU member states, JI/ET schemes as well as commercial loans, ISBF 2004 will broadly discuss the opportunities for financing of biomass projects.

Participants and speakers are provided with opportunity to inform and to be informed about current status of biomass utilisation in Slovakia/other CEEC, actions planned and future perspectives.

For the first time in its history, the conference was organized in the form of thematic workshops and panel discussions, moderated by top level experts and journalists. The main goal is to connect diverse market interest groups, focus on identification of weak points, find out solutions and significantly contribute to biomass take-off in the market environment. ISBF 2004 helped to establish fair business activities, contacts and ideas among actors from Slovakia and other EU countries.
